Bank of DeFI Introduction - Powering the next generation of decentralized applications

Bank of DeFI is a Layer 2, Binance Smartchain blockchain that is designed to provide a secure, scalable and efficient platform for decentralized applications. The blockchain is built on top of the BSC mainnet, and it uses advanced encryption techniques to protect user data and transactions. The Bank of DeFI ecosystem also features a native token, which is called bDEFIbot.

MISSION

Bank of DeFI Mission

One of the major challenges in the blockchain industry is the lack of interoperability between different networks. Users often face difficulties transferring assets across chains, leading to siloed ecosystems and limited liquidity. Additionally, scalability issues on Layer 1 blockchains, such as BNB Smartchain, create delays and high fees.

ROADMAP

Phase 1

- Token Launch in Pancakeswap
 - Website Release
- Lock Liquidity 50% for 1 month in PinkLock

Phase 3

- Audit
- Wallet bDEFI
- BDEFI Launcher
 - CMC & CG
 - CEX Listing
 - Mainnet
- Reach 1000 Holders

Phase 2

- Utility bDEFIbot Release
- Marketing Campaign
- Reach 200 Holders
- Own Lock Liquidity (bDEFI locker)
- Testnet

TOKENOMICS

Total Supply

1.000.000

Tax

10% for each transaction
(buy and sell)

Tax Breakdown

3% for Team

5% Marketing & BuyBack

2% for Infrastructure
